

What is claimed is:

1. A wheeled chair having a clothes hanger comprising:

a chair back provided with a height-adjusting device, a cushion device and a clothes hanger for hanging clothes and adjusting the height of the clothes hanger;

a chair seat connected with the chair back using a fixing frame; and
a stand connected to the chair seat using a tubular axle.

2. The a wheeled chair having a clothes hanger of Claim 1, wherein the fixing frame is L-shaped so that the back side of the chair is attached to the vertical section of the fixing frame.

3. The a wheeled chair having a clothes hanger of Claim 1, wherein the fixing frame is provided with a plurality of screwed holes, the number of the screwed holes being odd.

4. The a wheeled chair having a clothes hanger of Claim 1, wherein a right top lateral side and a left top lateral side of the fixing frame are each provided with a retaining base; wherein each of the retaining bases is provided with a through hole for receiving a corresponding arm of a U-shaped adjusting frame so that the adjusting frame is capable of moving vertically along the retaining bases.

5. The a wheeled chair having a clothes hanger of Claim 1, wherein a bottom end of the fixing frame is provided with a cushioning butterfly plate.

6. The a wheeled chair having a clothes hanger of Claim 5, wherein at least one pull resistant block is mounted under the cushioning butterfly plate.

7. The a wheeled chair having a clothes hanger of Claim 1, wherein the cushion device comprises a button, a tenon tongue, a spring and a mounting box.

8. The a wheeled chair having a clothes hanger of Claim 1, wherein the height-adjusting device includes a U-shaped adjusting frame.

9. The a wheeled chair having a clothes hanger of Claim 8, wherein

each side arm of the adjusting frame is provided with a plurality of cushioning indentations in the upper portion thereof.

10. The a wheeled chair having a clothes hanger of Claim 8, wherein each side arm of the adjusting frame is provided with a plurality of stopping
5 indentations in the lower portion thereof.

11. The a wheeled chair having a clothes hanger of Claim 8, wherein each side arm of the adjusting frame is provided with a pull resistant retaining indentation at the bottom end thereof.

12. The a wheeled chair having a clothes hanger of Claim 1, wherein the
10 clothes hanger is a T-shaped body composed of a transverse bar attached to a bar mount that is locked on a top end of the U-shaped adjusting frame; wherein the transverse bar forms an arc and has two ends each provided with an anti-slip granular structure for preventing clothes from slipping off.

13. The a wheeled chair having a clothes hanger of Claim 1, wherein the
15 anti-slip granular structure is a granular anti-slip piece.

14. The a wheeled chair having a clothes hanger of Claim 9, wherein the transverse bar is provided with a handle in a middle lower portion thereof.

15. The a wheeled chair having a clothes hanger of Claim 1, wherein a rear side of the chair back is provided with a groove that is equal in length
20 to the clothes hanger.
